The ROM version given for each trap indicates the ROM Version with Rom ver. which the trap became available. (It does not necessarily indicate whether or not the trap is in ROM). This information if given primarily for historical reasons. You should use the **Gestalt** routine to determine if a particular feature is available on a certain machine, rather than checking the ROM version. *mvMem* The function may cause memory blocks to move or be purged interrupt! The function should not be called at interrupt time Axxx/xxxx Trap word / selector (if any) Dispatch routine used in conjunction with selector, also used to denote Asm macro the assembler equivalent if there is one

may move ROM or purge ver. memory?	C/Pascal Name	Hex Trap Word xxxx/sel	Asm macro name if different, or dispatch routine
