Timing Services

You can schedule routines to execute at a later time using the
Time Manager. The **Time Manager** provides a hardware-independent
method of performing time-related tasks.

You can schedule routines to run periodically or after a specified delay. Time
delays can be specified in milliseconds or microseconds in System 7.0. You can
achieve a maximum resolution of 20 microseconds. This gives you greater
accuracy in coordinating sound, multimedia, and other events that require
precise timing.

See the **Time Manager** for information on how to schedule a routine for
later execution and how to compute elapsed time.
