Converting TextEdit records

Frequently, you want to use a <u>TextEdit record</u> in a function that expects a string of type <u>Str255</u>. These routines let you convert between them:

```
void TERectToStr(TEHandle hTE, Str255 str)
{
    GetIText( (*hTE)->hText, str );
}

void StrToTERec(Str255 str, TEHandle hTE)
{
    TESetText( (Ptr) &str[1],  (long) str[0], hTE );
}
```
