**The 'vers' Resources**

You can include 'vers' resources to provide version information for your Monitors extension file. The 'vers' resource with a resource ID of 1 specifies the version of your Monitors extension file. The 'vers' resource with a resource ID of 2 specifies the version of the group to which your file belongs-for example, the version number of the video card that your extension file supports. See the **Finder Interface** text for more information on 'vers' resources.
